Stop head lice from spreading with

BUG BAG[®]

The easy, effective tool to keep your kids lice-free at school,
nursery and camp

photography: Yves Paternoster, design: B'cause © BugBagUSA

THIS IS HOW IT WORKS:

BUG BAG combines a simple S-hook with a durable nylon tent to create a barrier between lice and your child's coat.

The specially-designed bead on the hook hermetically seals the top of the BUG BAG. No need for chemicals or pesticides.

CHILD FRIENDLY:

The BUG BAG is easy to use. Just hang your coat on the hook in the BUG BAG. Kids can easily identify their BUG BAG by color or by writing their name on the collar of the BUG BAG.

Lice are creepy and crawly. They don't fly or jump. They crawl from coat to coat, collar to collar, collar to head. BUG BAG® collars lice.

DESIGNED BY A MOM:

BUG BAG was designed by a mother in Holland who was tired of spending hours cleaning and delousing her child and her house.

TESTED IN SCHOOLS:

Approximately 50% of kindergarten and elementary schools in Holland use the BUG BAG and have greatly reduced lice outbreaks. BUG BAG is recommended by the Dutch Department of Health as an effective deterrent to the spread of head lice.

Lice are "in the bag" with BUG BAG®
